RISKS

Equity Securities Risk: Equity securities generally have greater risk of loss than debt securities. Stock markets are volatile, and the value of equity securities may go up or down, sometimes rapidly and unpredictably. The value of equity securities fluctuates based on real or perceived changes in a company’s financial condition, factors affecting a particular industry or industries, and overall market, economic and political conditions. If the market prices of the equity securities owned by the strategy fall, the value of your investment in the strategy will decline. Your portfolio may lose its entire investment in the equity securities of an issuer. A change in financial condition or other event affecting a single issuer may adversely impact securities markets as a whole.

Fixed Income Risk: Fixed Income investments may or may not be subject to different tax charges. Bond investments are extremely sensitive to changes in interest rates and other related economic conditions. In a rising interest rate or inflationary environment, bond prices may fluctuate quickly. In addition to pre-payment and other early principal pay back, interest and re-investment risk are also factors that should be considered.

International Investing Risk: Investments in global/international markets involve special risks not associated with U.S. markets, including greater economic, political and currency fluctuation risks, which are likely to be even higher in emerging markets. In addition, foreign countries are likely to have different accounting standards than those of the U.S.

Principal Risk: Risk is inherent in all investing. Many factors and risks affect performance. The value of your investment, as well as the amount of return you receive on your investment, may fluctuate significantly day to day and over time. You may lose part or all of your investment in your portfolio or your investment may not perform as well as other similar investments. An investment in the strategy is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. **You may lose money if you invest in this strategy.**

Value Investing Risk: The prices of securities TSW believes are undervalued may not appreciate as anticipated or may go down. The value approach to investing involves the risk that stocks may remain undervalued, undervaluation may become more severe, or perceived undervaluation may actually represent intrinsic value. Value stocks as a group may be out of favor and underperform the overall equity market for a long period of time, for example, while the market favors “growth” stocks.
